

7 Steps of Handwashing

Step 1 - Hands should be wet with liquid soap applied for a good lather. (Water temperature needs to be between 35 °C and 45 °C)

Step 2 - Rub your hands palm to palm.

Step 3 - With your right palm rub the back of your left hand. Swap hands and repeat.

Step 4 - Then, interlace your fingers and rub your palms together.

Step 5 - Interlock your fingers and rub the backs of them against your palms.

Step 6 - Enclose your right hand around your left thumb and rub as you rotate it. Swap hands and repeat.

After washing, always thoroughly rinse your hands in warm running water, and dry with a clean disposable towel.

Never use reusable towels as you will transfer harmful bacteria back onto your clean hands.
